Fusion Research shows new Green product at CEDIA

New Cinema Player has a lower price and less energy consumption

CEDIA Booth # 2537, Atlanta, 9/9/2009 - Fusion Research announces the availability of a new MiniGreen 1080p Cinema Player to compliment the current line of Fusion media servers.

The player is extremely energy efficient, requiring only 18 watts. This also results in a very low operating temperature, which combined with its small dimensions makes it an excellent choice to place in convenient spots like behind displays.

Joe Storm, President of Fusion says, "This player is a major step forward for our dealers." "Cheaper, smaller and lower energy usage will give integrators even more flexibility in their installations."

The MiniGreen Player is 2.45" x 7" x 8", features a versa mount and two will fit in one rack width. A custom rack kit will be developed for it as well.
