## Fusion Enters New RV Market

*Fusion introduces new Rocket Movie Server,  
the first movie server designed for mobile applications.*

**Danville, CA - 5/18/11** - Fusion Research announced today that they have introduced a new movie server designed specifically for mobile environments initially targeted at RV, small marine and trucking industries.

Joseph Storm, Fusion's CEO and President developed the idea behind the new product and explains, "...mobile environments require a successful product to have specifications not found in traditional media servers. The Rocket Movie Server is very small, does not produce much heat and runs on just 18-watts of power making it very energy efficient".

The new movie server will have all the features and capabilities of the company's award winning media servers, but will cost much less than their residential cousins. The movie server does not require a network to run and has special loading features so that movies can be added in a mobile environment.

According to the company's CEO, "...you can still add inexpensive storage to these little servers so that you can still manage a very large collection of movies. They are also very easy to transport from one place to another so that you can take your entertainment with you, even if it's over a thousand movies without a problem".

All Fusion media products can now be setup only requiring a handheld remote, not needing a PC to configure or extensive networking knowledge.

### About Fusion Research

Fusion Research is a leading manufacturer of media servers allowing people to collect, manages, and display their movies and music throughout their home, business or yacht. The company focuses on the professional custom integration space with solutions tailored to work with Crestron, AMX and Control4 and other control products.
