

How to repair a corrupted OS on the EPIC Movie Platform

1. With the server powered off, plug in the USB keyboard, USB mouse, and monitor.
2. Power on the server and press F9 and F11 until a boot up menu prompt comes up.
3. Pop the repair disc into the optical drive tray and close it.
4. Select the optical drive within the boot menu (it should look similar to HL-DT-ST-BDDVDRW) and hit enter.
5. When prompted to boot from the CD or DVD drive, hit enter.
6. Choose the language and select next.
7. Select Repair your computer.
8. Once it's done scanning, it should highlight a Windows Embedded Standard installation.
9. Select Next.
10. Click on Startup Repair.

11. It will now begin to repair the OS. Once it's completed you can click on Finish.

12. Pop the disc out and select Restart.
