Fusion Research Music Servers Now Support Apple's AirPlay 2 for Seamless Wireless Audio Streaming

Danville, CA 3/17/2023 - Fusion Research, a leading provider of music servers and automation solutions, has announced the addition of Apple's AirPlay 2 to its line of music servers. With this new feature, users can now enjoy seamless wireless audio streaming from their Apple devices to any Fusion Research music server.

AirPlay 2 is a powerful wireless audio streaming technology that allows users to stream high-quality audio from their Apple devices to multiple speakers and devices at once. With AirPlay 2 built into Fusion Research music servers, users can now enjoy the benefits of this technology without having to invest in additional hardware or equipment.

"Adding AirPlay 2 support to our music servers was a natural choice for us," said Ingo Schmoltdt, VP of Sales for Fusion Research. "Our customers have been asking for this feature, and we are excited to be able to deliver it to them. With AirPlay 2, users can enjoy seamless wireless audio streaming from their Apple devices to any room in their home, all from the comfort of their couch."

In addition to its advanced wireless streaming capabilities, AirPlay 2 also offers advanced buffering technology, which ensures that there is no delay or interruption when streaming music. This means that users can enjoy high-quality audio without any dropouts, even when their network is congested or their Wi-Fi signal is weak.

For more information about Fusion Research music servers and the new AirPlay 2 feature, please visit the Fusion Research website or contact your nearest authorized Fusion Research dealer.
