Fusion Research Introduces a 4k/UHD Movie Server

New unit outputs 4k and archives UHD discs as well as DVD & Blu-rays.

Danville, CA 05/21/19 - Fusion Research has announced that they are now shipping a Genesis 4k/UHD movie server. This unit will replace the current Genesis Movie Server line and feature 12TB of RAID storage and the ability to archive UHD discs as well as a client's DVD and Blu-ray collection. It is available for \$6999 MSRP, which is \$1000 less than the previous model Genesis 12TB model.

These units output 4k video and can be controlled either through a supplied IR remote or via automation control systems like Control4, Crestron, Elan, RTI, Savant, URC and Vantage. In addition to the Genesis 4k Server, Fusion is also introducing a 4k/UHD player with a built-in loader that can be added into existing Fusion systems. The player will add an additional discrete source to the system and while it doesn't have any storage, it will send that bit-for-bit copy of the UHD (or DVD & Blu-ray) to the associated server and/or NAS storage unit. The player will retail for \$3999 MSRP.

"This has been, by far the most requested feature upgrade for our movie server line," said Alexander Fanti, CTO of Fusion Research. *"It required a lot of engineering, but we are very happy to offer our dealers and their clients a server that archives their entire disc collection."*

Fusion is also using this announcement to streamline its movie server line-up. With the recent tariff increases, they are choosing to discontinue their Premiere 2TB model, while continuing with their Premiere 4TB server at its current price. An updated dealer price list may be obtained by emailing info@fusionrd.com.

About Fusion Research

Fusion Research is a leading manufacturer of media servers, allowing people to collect, manage, and display their media throughout their home, business or yacht. The company's products have received numerous awards and industry recognition. Fusion supports Blu-ray, DVDs, music & streaming media.
