Fusion Research Doubles the Sources on Solo Music Server
Solo now has two sources and Duet three sources, no price increase

Danville, CA 02/20/19- Fusion Research announced that effective immediately, they will offer an additional discrete audio output on its Solo and Duet streamers at no additional cost, making its entry-level piece the lowest cost two-source solution in the industry.

Fusion music servers can be controlled via a free iOS or Android app or approved drivers from major automation companies like Crestron, Control4, RTI, Elan, URC, Niles, Speakercraft, Compass Controls and some Savant systems. The new dual source Solo is priced at $599 MSRP allowing integrators to offer two independent sources at less than $300 each and the rack mountable Duet has 3 sources for $949.

"Most residential and commercial clients request more than one independent audio source. By upgrading the Solo to be a two output source unit, it fulfills that need for under $600, making us the market leader for value in this category," said Joseph Storm, President of Fusion Research. *"We are also able to offer this upgrade to previously purchased Summit OS based servers for a nominal fee."*

This upgrade is the latest update to the Fusion music server line-up that now features deeper dealer margins, new mobile apps for control and setup, a new desktop control system and automated iTunes synchronization. In addition, several more streaming services will come online later this year.

Fusion Music Servers are available through Control4 and Nortek online stores or directly from Fusion. For more information about the Fusion music servers, visit www.fusionrd.com, call 925.217.1233 or email: info@fusionrd.com

About Fusion Research

Fusion Research is a leading manufacturer of media servers, allowing people to collect, manage, and display their media throughout their home, business or yacht. The company's products have received numerous awards and industry recognition. Fusion supports Blu-ray, DVDs, music & streaming media.
